If using Glacier Pro Plow System with tracks, Track Plow Extension is required (2889267)

For year-round use, Polaris recommends the use of Intake Update Kit (2880673) on any RANGER XP 1000 '17, RANGER XP 1000 CREW '14-18 with tracks installed. To keep intake system working optimally, this kit pre-filters out fine snow and dust.

- 1 INDUSTRY-FIRST FLEX-TRACK DESIGN**

Front-mounted tracks with flexible sides and a slight inward curve allow for stable handling, a more comfortable ride and precise steering over long-distances or extended working hours.
- 2 HIGH-DENSITY TIRE WITH ADJUSTED SHAPE**

With puncture-proof tires that reduce friction and wear, the Prospector Pro 2.0 Tracks delivers trouble-free performance.

Confidently take on bumps and obstacles with 8" high-density tracks.
- 3 LIGHTWEIGHT POWDER COAT STEEL FRAME**

Proven geometry to improve durability and deliver capability in all conditions throughout the life of the tracks.

A lighter frame provides more flotation to stay on top of the snow and allows the tracks to easily shed the elements they encounter.
- 4 TANDEM STABILIZER**

The bolt-on, tandem mid-roller wheel provides a smoother ride by absorbing shocks.
- 5 BEARING HOUSING**

Outer seals and stainless steel sleeves allow stronger bearing durability and greater reliability.
- 6 WHEEL CAP & SEAL**

A fitted wheel cap with bladder effect eliminates water absorption due to temperature variation. Ride in snow or mud without worrying about track maintenance.

THE BEST PROTECTION, MAXIMUM PERFORMANCE

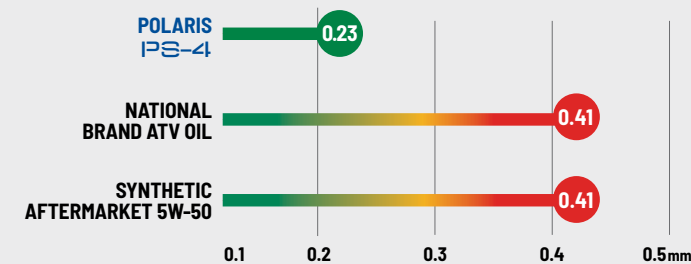

- Powersports grade full synthetics provide long lasting engine protection
- At least 40% improved wear protection compared to all aftermarket oils tested (see engine wear test chart)
- Polaris exclusive clean additive system
- At least 50% less deposits than all aftermarket oils tested (see deposit test chart)
- Cleaner engine with less deposits means consistent maximum power and performance

WIDEST VISCOSITY FOR ULTIMATE PROTECTION

ENGINE WEAR TEST

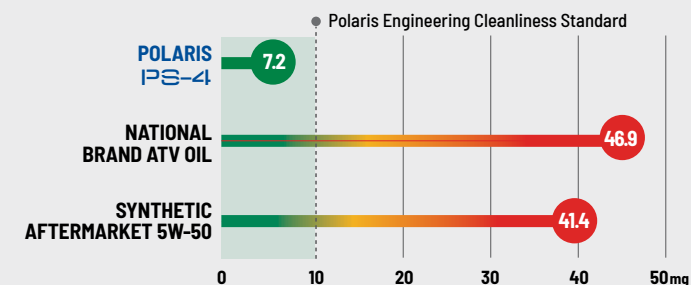

LOWER NUMBER = LESS ENGINE COMPONENT WEAR
LESS WEAR ON PARTS MEANS LONGER ENGINE LIFE

ASTM D4172. In 3rd party testing against 9 competitive products Polaris had 40% or better wear protection compared to all of the tested products. Numbers represent mm of wear scarring measured. Test measures wear at contact points, wear scar is measured for its length and width (in units of mm). Lower wear numbers mean better wear protection and friction reduction.

DEPOSIT TEST

LOWER DEPOSITS = MAXIMUM POWER

ASTM D6335. In 3rd party testing against 9 competitive products Polaris PS-4 had less than half the deposits compared to the next closest product. No other tested products met Polaris Engineering standards for deposit cleanliness. Test measures mass of deposits in mg in high temp, high stress test cycles. Higher deposits will impact engine power and performance.
